

Name :- Aniket Senapati

Class :- MCA - 4th Sem

Roll no :- 2305260003

Jan 13-18

Week - 1

3rd Jan - Check all the setup are available or not if not then we installed it check the version of Java and others thing that required for spring boot based project

4th Jan :- Decide project name, design our logo and theme color, what colors our website have.

5th Jan :- Study about landing page, PLP (product listing page), PDP (Product description page) and make a overview of this.

16th Jan :- Start designing homepage using html, CSS and JS to make it responsive and logo, header, footer, sections etc.

7th Jan :- Add search bar, ~~background~~ and casual advertisement banner.

18th Jan :- Add Hamburger in a homepage

CEAT

and side panel using JS so we study about
JS as we study about JS as well see that
i can add more features of it.

Saurabh
19.01.25

Jan 20-25

Week - 2

20th Jan :- Where which folder should be created and which file will be created that we studied about and why it will be created there that we studied.

21st Jan :- As my project is a blogging site so I decided that what type of user will be there so that I can handle it smoothly.

22nd Jan :- Start designing PLP and PDP page ~~and~~ simultaneously that page we have navigation bar search bar and etc.

23rd Jan :- We study about using Fragment by the help of this the code reusability will be happen and it will look professional.

24th Jan - Design all types of ER diagram
which table it will decided.

25th Jan - Add project on Github repository
to work easily & have the dates for
long term.

~~Sumit~~
26-01-25

Jan 27 - Feb 01

Week-3

27th Jan:- We do all the setups of Git then we study about code push & pull to the bit.

28th Jan:- We study about ER Diagram so that we can apply it & enhance the entity relationship.

29th Jan:- We create script .sql folder there we can write the queries for all the tables we have and create database

30th Jan:- We study about MySQL workbench and there we can see our database all tables and which data will be come from backend.

31st Jan:- Learn for making branches in git and done pull and push in the project.

1st Feb - Learn about Pull request in github and implemented it.

CEAT

Signature

Feb 3 - 8

Week-4

→ Create category class for categories in our ~~api~~ techtrekker project.

→ Make what thing we needed in category page.

4th Feb

- Create tables in script file for our project.

- Built relationship between tables that are present in our project.

5th Feb

- Work on MySQL Workbench

- Learn how to run database on MySQL

6th Feb.

Create entity folder under which java entity class are written.

7th Feb

Study about Fragment in Java to separate common file.

3th Feb

Study about framework list in Java.

Decide no of pages we have to done for our ~~report~~ project.

4.02.25

~~407~~ Feb 10 - 15

Week-5

10th Feb:- We know about ticket creation on github where it will create a issue and assign someone ~~of~~ after the completion the issue is resolved.

11th Feb:- Download image from internet and upload as statically as our website per overlook.

12th Feb:- We know about upload ~~for~~ folders where it can add the img at dashboard and it will automatic come in that folder and it will there at database as well here we can bind the data dynamically from backend.

13th Feb:- ~~Now we design admin dashboard~~

5th Feb:- After adding all category and product we do the data bind with search bar where we do the search it will redirect to that PLP page.

Suman
16.02.25

Feb 17-22

17th Feb - Study about UID where it will be implemented in ~~a~~ relation ship tables of a user IDS or any other id's type. Week-6

18th Feb - Study about authorized class where we need to make a connection betⁿ repository.

19th Feb - We write a code for data bind with PLP page and after clicking on single product it will redirect page so pdp page ~~is~~ will need to bind the data from ~~the~~ backend.

20th Feb - Study about request param and how to implement it and where to implement it.

~~25 Feb - After adding widget there
we add category in~~

Feb - March 01

week - 7

4 Feb :- Adding categories in a admin dashboard for user page and irrespective of that upload the image as well which is dynamically fetch from backend

25th Feb - Study about ~~backend~~ Beekeeper where if only one member can have access of data of database then it will exchange the data from each other.

26th Feb :- Add edit and delete button on admin and widget dashboard for changes in category. ~~feedback~~

27th Feb :- Fixing error in a admin dashboard and other things

CEAT

01st March :- Study about variable, method
class and many more
things of core java.

Smaran
2.03.25

March 2023-08

Week-8

10/03 :- Fixing error in Plp and Pdb
backend work.

10/04 :- Study about all ~~data~~ dependencies
that are used in the spring boot
and we used it in our project.

10/05 :- study about testing method
jose method and others.

10/06 :- study spring security and
it's dependency after that we
apply it on our own project
it will redirect to many
error we fix it.

10/07 :- study about bean and password
registration method where the
password will have in a crypt format.

10/08 :- implement the security **CEAT**
we will give the access that all ~~Spring~~
pages to this for user access. **9.03.25**

Mar 10-15

Week-4

Mar 10:- Solve the security issue where user can't access admin page or admin can access all other page

Mar 15:- Fixing error of security and do the data bind with edit and delete buttons which is there in a widget

ED

~~Mar 15~~
